Introduction to Project

Introduce your project and problem statement.

Electricity is generated when a conductor is moved around a magnetic field.
How to design a circuit to generate 12V electricity from a magnetic field.

Circuit Diagram

Put your circuit diagram and calculations. The state-space representation of the system can be written as follows:

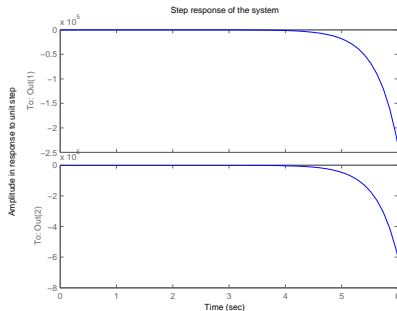

Figure: This is sample figure - put your circuit diagram.

Circuit Analysis

Put analysis that you perform in this slide. (Calculations of voltage and calculation of currents).

Results

Put results that you obtain with pSpice and actual results.
